Monday – Friday 8am – 4:30pm

E-Mail- EnvHealth@warrencountyia.org

Warren County Environmental Health is the main contact regarding septic permitting and inspection. We require permits any time a new system is being installed, or an older system is being repaired.

If you do not have an address:

- Contact the Warren County Zoning office to start an address routing slip. Zoning also determines if the lot is buildable and discusses FEMA Floodplain issues, if there are any.
- Contact the Warren County Engineer's office to apply for an entrance for the property.
- Contact Warren County Assessor's office to discuss what type of structure you will be building.
- Contact Environmental Health to discuss information regarding proposed your septic system.
- Warren County E911 will address your property once the Engineer's office has approved your driveway. This may take several weeks as the Engineer's office needs to make a site visit to approve the driveway, then the application is sent to E911 for an address.

If you are in the process of getting an address for your property or have a valid E911 address, you can start the septic system permitting process by ordering a soil analysis or perc test.

- Environmental Health does not conduct soil analysis or perc tests. Included in this packet is a list of individuals who conduct soil analysis or perc tests.
- Warren County requires the individual that conducts a soil analysis or perc test be a Professional Engineer or a Soil Scientist.
- The soil analysis or perc test will determine what kind of septic system is required.
- Systems are sized by the number of bedrooms. Please inform your soil engineer/soil scientist about the plans for your house or any outbuildings needing a septic system.
- Soil analysis or perc tests are valid for 1 year from the date the test was conducted.
- Warren County Environmental Health utilizes an online permitting system for septic permits. To start and application for a septic permit please visit the Warren County Website at www.warrencountyia.gov, Navigate to the "How to I..." menu and then choose "Apply for a building permit." This will redirect you to a page where you can choose to start an application for a septic permit or building permit.
- Warren County requires the septic contractor to hold the Certified Installer of Onsite Wastewater Treatment System (CIOWTS) credential. Included in this packet is a list of contractors who are certified.
- The online permitting system will email you prompts when information is needed from you regarding the septic system application. As part of the process, Warren County Environmental Health staff will complete a site visit to check for any issues with system design, placement or setbacks. When all information has been received, the permitting system will email you a link to pay for your septic permit online.
- The permit fee for a certified septic contractor is currently \$300.00.

- If your septic system requires a maintenance agreement, we will not issue the permit until we have a valid maintenance agreement on file. This maintenance agreement can be uploaded through the online permitting system. Included in this packet is a list of maintenance providers.
- Warren County has adopted IAC 567- Chapter 69 – Private Sewage Disposal Systems in its entirety. Warren County also follows Warren County Ordinance – Chapter 31- Onsite Wastewater Treatment and Disposal Systems. These will be the regulations we use to inspect the septic system at your property.
- If you have questions regarding our process for inspecting a septic system once it is permitted, please talk with an Environmental Health staff person as each type of system has certain specifications that we follow.

If you need to make a repair or alter your existing septic system, you will need to work with our office to determine what components of the system need to be repaired or altered.

- A repair permit is currently **\$150.00**.
- A credentialed/certified septic contractor can complete the work.
- Repair or alteration permits are issued for the follow reasons:
 - Replacing the distribution box
 - Replacing only the primary for of treatment (septic tank)
 - Replacing only the secondary form of treatment (lateral field/sand filter/peat or coco, etc.)
 - Hooking the existing septic system into a new building
 - Replacing a significant amount of piping
 - Replacing the media in a coco/peat filter
- If you are only replacing one component such as the primary or secondary form of treatment, you need to talk with an Environmental Health staff person to determine if any other component needs to be altered or repaired.
- If there is a discrepancy regarding the number of bedrooms in the dwelling, staff will work with the owner to gather as much information as possible to determine the accurate number of bedrooms. Examples of documentation staff ask for and conduct research on are floor plans, realtor sites, Beacon, and working with the Warren County Assessor's office.

*Order of these providers does not indicate preference.
